

The Secret of a Great Bubble Mix

While preparing this activity we experimented with many detergents, foam bath products and soaps: mixing them with various quantities of glycerine, syrup, gelatine, sodium bicarbonate and water both tap and distilled. Nothing from the family kitchen or bathroom cupboard came close to making a great bubble mixture.

We then went back to basics and bought the cheapest foam bath solution we could find from our local discount store. This produced the most wonderful bubbles.

Unless you wish to spend time developing your own secret bubble formula from purified raw ingredients we would suggest 'keep it simple' and visit your local discount store.

Alternatively we can supply Eco friendly Pustefix bubble solution in ¼ litre, ½ litre, 1 litre and 5 litre quantities. Pustefix Bubble solution is made from environmentally friendly raw ingredients and produces the best quality rainbow bubbles we have ever seen.

We will let you into a secret. We did add a little Glycerine about 1:10 to our cheap bottle of bubble bath and noticed a slight improvement in bubble quality. *We just cannot resist experimenting at Eco-life gizmos.*

Try it and find out if you can develop the greatest bubble solution ever.

Let us know at www.ecolifegizmos.co.uk how you get along.
